

Mathematical moments with 3 & 4 year olds

Number: subitising

Giant dominoes

The children in the videos were engaged by the giant domino cards, which they had not seen before. They seemed to get a lot of satisfaction from naming the numbers they saw, even if they were unsure. Some four year olds were confident with the familiar dice patterns to six. Others recognised one, two and three, but needed to count four and five. Some children seemed happy to recognise one and say any number for more than one!
