

## Birth to Five Matters mathematics guidance with recommended links

# Number

Early Childhood Mathematics Group

These charts supplement the mathematics section of [Birth to Five Matters](#), with examples of what children are typically learning and how to support them. They provide links to videos of children and a range of resources for practitioners. This Number document is one of a series about five aspects of mathematics: the others are spatial awareness, shape, pattern and measures. These are presented as separate developmental progressions to help practitioners observe and plan, however in reality children simultaneously draw on a range of areas of learning in their everyday activities and play. Children's mathematical development will depend on their experiences, and the pace of their learning across different aspects will vary. All children learn differently but development tends to broadly follow the sequences described.

The charts include a summary of early number development followed by expanded versions of four aspects of number: counting, comparison, cardinality and composition. These are intended to help practitioners in identifying and supporting the full breadth of number learning. For babies (ranges 1 & 2), guidance is the same across the number strands. The composition strand builds on cardinality and develops later (ranges 5 & 6). The charts can be used alongside [Birth to Five Matters](#) and [Development Matters](#).

The embedded links are to specific sources, such as our [Mathematical Moments](#) vignettes, some of which include videos. There are also links to more general mathematics guidance (situated along the top of the charts and in the range boxes where these are range specific). For links provided by other organisations, the ECMG cannot accept responsibility for their content or longevity. We hope that they will be useful to individual practitioners and teams of colleagues to support observation, planning and professional development.

### Counting

Saying or using the number words. We use many skills to count. The order is crucial and numerals are helpful.

### Cardinality

The meaning or 'how many-ness' of numbers. We count or subitise to know 'how many'.

### Composition

Numbers are made up of other numbers. 3 is made up of 2 and 1 as well as 1, 1 and 1, also 3 and 0

### Ordinality

Ordinality is placing numbers in sequence. 3 comes after 2 and before 4. It is the relationship between numbers.

### Comparison

Comparing two or more numbers to find which is more/less (how many), smaller/greater (size) or before/after (order).

## Mathematical developmental progressions from birth to five years old

### Number: overview

Children's development will depend on their experiences, and the pace of their learning across the different aspects of mathematics will vary. All children learn differently but development tends to follow the sequences described below. Number learning develops alongside and in relation to other areas of maths and indeed children's holistic learning. For younger and older babies (ranges 1 & 2) our guidance is the same for all the number strands. The composition strand develops later in ranges 5 & 6, building on cardinality.

Click on the text links to access examples and related guidance from a range of sources to support practice. You may also find these sources of general guidance helpful for practice around number and other areas of mathematics. \*indicates a login is required (free)

## Mathematical learning trajectories from birth to five years old

### Number: Comparison

Children's learning trajectories will depend on their experiences and the pace of their learning across the different aspects of mathematics will vary. All children learn differently but development tends to follow the sequences described below. Comparison is one of the four strands of number (the others are counting, cardinality and composition). For younger and older babies (ranges 1 & 2) our guidance is the same for all the number strands. The composition strand develops later and is included with ranges 5 & 6.

Click on the text links to access examples and related guidance from a range of sources to support practice. You may also find these sources of general guidance helpful for practice around comparison and other areas of mathematics.

<b>3 Toddlers</b>  <a href="#">ECMG</a>  <a href="#">Count with me</a>	<b>Respond to words like <i>lots or more</i></b>	<ul style="list-style-type: none"> <li>- Talk with young children about <i>lots, more, not many, not enough</i> and <i>few</i> as they play.</li> <li>- Draw attention to contrasting differences and changes in amounts e.g. adding more bricks to a tower or eating things up.</li> <li>- Take opportunities to say number words in order with children as they play, e.g. <i>1,2,3 go!</i></li> </ul>	<ul style="list-style-type: none"> <li>- Varied sets of objects for children to independently explore <i>lots, more, not many</i> and <i>not enough</i> e.g. a huge pile of leaves for throwing, chocolate box or biscuit trays to put items into or counting the number of crackers at snack time.</li> <li>- Share books like <a href="#">More, More, More said the Baby.</a></li> </ul>

<p><b>4 2 year olds</b></p> <p><a href="#">ECMG</a></p> <p><a href="#">Count with me</a></p>	<p><b>Compare and recognise changes in numbers of things, using words like more, lots or same</b></p>	<ul style="list-style-type: none"> <li>- Include the number sequence in everyday contexts and songs so children experience the order of the numbers (ordinality).</li> <li>- <a href="#">Make and discuss collections with children, encouraging them to compare amounts.</a></li> <li>- When singing number rhymes with props, draw attention to contrasting differences and changes in numbers e.g. increasing amounts of fruit in <a href="#">The very hungry caterpillar.</a></li> </ul>	<ul style="list-style-type: none"> <li>- Buckets and bags for children to create collections of objects so they can to compare numbers e.g. beads, pine cones, pebbles</li> <li>- Singing number rhymes with props, including those with increasing numbers e.g. <a href="#">One little teddy</a> or <a href="#">An elephant went out to play</a></li> <li>- Counting to higher numbers, in a variety of contexts, indoors and out, sometimes counting backwards to zero e.g. playing hide and seek, <a href="#">going up and down stairs.</a></li> </ul>
<p><b>5 3 year olds</b></p> <p><a href="#">ECMG</a></p> <p><a href="#">Count with me</a></p>	<p><b>Compare two small groups of up to five objects, saying when there are the same number of objects in each group, e.g. You've got two, I've got two. Same!</b></p>	<ul style="list-style-type: none"> <li>- Encourage children to share items fairly between two people or toys e.g. playdough cakes, trains or mud pies.</li> <li>- Sometimes suggest making one group bigger than another e.g. <i>The bigger teddy needs more than the little one.</i></li> <li>- Enjoy counting forwards and back (sometimes to much higher numbers). Use different voices, e.g. high or growly.</li> <li>- Emphasise the <i>one more, one less</i> pattern in rhymes and traditional tales, asking children to predict the next number, e.g. when one frog jumps off the log.</li> </ul>	<ul style="list-style-type: none"> <li>- Mats, dishes and trays for sharing items between two people or toys.</li> <li>- Stories with props for comparing e.g. <a href="#">Kipper's toybox</a> and <a href="#">More, fewer, less.</a></li> <li>- Games with dot and numeral dice to do a number of actions or collect a number of things, discussing e.g. <i>that six on the dice is worth more than the four.</i></li> <li>- Resources and collections indoors and outside for children to explore and talk about higher numbers.</li> </ul>
<p><b>6 4 &amp; 5 year olds</b></p> <p><a href="#">ECMG</a></p> <p><a href="#">Count with me</a></p>	<p><b>Use number names and symbols when comparing numbers e.g. knowing six is worth more than four, with dot and numeral dice</b></p> <p><a href="#">Know the order of numbers and where they go in relation to others e.g. whether six is before or after five, whether seven is nearer to five or ten.</a></p> <p><a href="#">Estimate numbers of things, showing understanding of relative size</a></p> <p><b>Show an interest in large numbers, e.g. talking about hundreds, thousands and a million!</b></p>	<ul style="list-style-type: none"> <li>- Pose problems about fair shares e.g. tell stories about a character distributing things unfairly, varying and increasing numbers of things and people. Model comparing numbers e.g. <i>Little teddy says it isn't fair- the big bear has five and she only has four.</i></li> <li>- Sing counting songs and count together in games such as Hide and seek, counting forwards and backwards, sometimes starting from different numbers and in different step sizes. Discuss numbers coming <i>before, after</i> and <i>between</i> and stress patterns.</li> <li>- Discuss ordinal numbers in context, e.g. model finding a page number: <i>Where is page 7? I know it is after page 5... this is page 10. Oh no! I've gone too far.</i></li> <li>- Encourage children to make predictions and visualise the outcome in stories, rhymes and songs if one (or two) is added or taken away, varying numbers.</li> <li>- Pose everyday estimation problems e.g. <i>How many sandwiches will we make for the picnic?</i> Establish mental benchmarks e.g. <i>Do you think there are more than 10, less than 10 or about 10 here?</i></li> <li>- Discuss examples and display large numbers including hundreds, thousand and a million, e.g. making stars for the sky in the space station, herds of animals or crowds of people.</li> </ul>	<ul style="list-style-type: none"> <li>- Stories and props for sharing problems e.g. <a href="#">The doorbell rang</a></li> <li>- <a href="#">A Voting Station</a>, e.g. for books to read at storytime, using linking cubes with children's names on.</li> <li>- Opportunities to order mixed-up numerals e.g. numeral cards on a washing line.</li> <li>- <a href="#">Resources to make "staircase" patterns</a> which showing the one more/one less relationship with next/previous counting numbers</li> <li>- An Estimation Station with objects in a jar (or large items in a crate outdoors) recording guesses before later counting the objects and putting the guesses in order. Provide a reference jar of 10 items or 3 identical jars, filled with e.g. beads, cubes &amp; sticks.</li> <li>- Books about ordinal numbers e.g. <a href="#">Loo queue</a> (The rhino is number 2 in the queue and the tiger is number 5, how many animals between them?)</li> <li>- Books about large numbers e.g. <a href="#">365 penguins</a>, <a href="#">How big is a million?</a> or <a href="#">A million fish, more or less.</a></li> </ul>

## Mathematical learning trajectories from birth to five years old Number: Cardinality

Children's learning trajectories will depend on their experiences, and the pace of their learning across the different aspects of mathematics will vary. All children learn differently but development tends to follow the sequences described below. Cardinality is one of the four strands of number (the others are comparison, counting and composition). For younger and older babies (ranges 1 & 2) our guidance is the same for all the number strands. The composition strand develops later, building on cardinality, and is included with ranges 5 & 6.

## Mathematical learning trajectories from birth to five years old

### Number: Composition

Children's learning trajectories will depend on their experiences, and the pace of their learning across the different aspects of mathematics will vary. All children learn differently but development tends to follow the sequences described below. Composition is one of the four strands of number (the others are comparison, counting and cardinality). For younger and older babies (ranges 1 & 2) our guidance is the same for all the number strands. The composition strand develops later in ranges 5 & 6, building on cardinality.

Click on the text links to access examples and related guidance from a range of sources to support practice. You may also find the sources below helpful for general guidance about counting and other areas of mathematics. \*indicates a login is required (free)

<p><b>5 3 year olds</b></p> <p><a href="#">ECMG</a></p> <p><a href="#">Count with me</a></p>	<p><a href="#">Through play and exploration beginning to learn that numbers are made up (composed) of smaller numbers</a></p> <p><b>Begin to recognise that each counting number is one more than the one before</b></p> <p><b>Separate a group of three or four objects in different ways, beginning to recognise that the total is still the same</b></p> <p><b>Begin to use understanding of number to solve practical problems in play and meaningful activities</b></p>	<ul style="list-style-type: none"> <li>- Encourage children to share items fairly between two people or toys e.g. playdough cakes, trains or mud pies</li> <li>- Ask two children to use their fingers together to show a number</li> <li>- Emphasise the <i>one more, one less</i> pattern in rhymes and traditional tales, using objects, fingers, pictures and numerals, asking children to predict and show the next number e.g. <i>How many frogs will be left on the log after the next one jumps off?</i> Then progressing to asking <i>What if two frogs jump off the log at the same time?</i></li> <li>- Support children to choose how to arrange collections of two, three and four objects in different ways, including partitioning, e.g. hiding a subgroup and “guessing” the number hidden.</li> <li>- Model wondering and talking about how you might solve a number problem, including using fingers</li> </ul>	<ul style="list-style-type: none"> <li>- Mats, dishes and trays for sharing items between two people or toys</li> <li>- props for counting songs and number stories, for children to use independently, e.g. <a href="#">5 little speckled frogs</a> or <a href="#">The shopping basket</a></li> <li>- Routines focusing on <i>How many?</i> And involving two groups, e.g. <i>We have four bikes but can only find two, how many are missing?</i></li> <li>- Play with dot dice and dominoes, discussing the numbers in the patterns on the dice e.g. twos in the four pattern and threes in the six pattern.</li> <li>- A variety of mathematical picture books, to discuss numbers arranged in different ways, e.g. <a href="#">10 black dots</a>. <a href="#">Count and see</a></li> </ul>

<p>6 4 &amp; 5 year olds</p> <p>ECMG</p> <p>Count with me</p>	<p><u>Show awareness that numbers are made up (composed) of smaller numbers, exploring partitioning in different ways with a wide range of objects</u></p> <p>Begin to <u>conceptually subitise* larger numbers in less familiar arrangements by subitising smaller groups within the number</u>, e.g. sees six raisins on a plate as three and three</p> <p><u>In practical activities, add one and subtract one with numbers to 10</u></p> <p>Begin to represent mathematical problems, using signs and strategies of their own choice, including (when appropriate) standard numerals, tallies and + or -</p>	<ul style="list-style-type: none"> <li>- Encourage children to use their fingers to show numbers to 10</li> <li>- Have daily 'number talks' that model conceptual subitising and invite children to say how they 'see' an image of e.g. eight things, as <i>four and four</i>, or <i>two and two and four</i>, or <i>five and three</i> or <i>six and two</i>, etc.</li> <li>- Provide opportunities for children to explore ways of making numbers in two groups e.g. <i>What are the choices if you can have 5 grapes, out of green and black grapes?</i></li> <li>- Encourage children to make predictions and visualise the outcome in stories, rhymes and songs, focusing on two groups making a number e.g. frogs on the log and in the pool, green bottles upright and fallen, the numbers in and out of the bed e.g. <u>Ten in the bed</u></li> <li>- Make up stories together which involve composition into two or more groups e.g. <u>Five friends counting</u>,* where some toys are doing one thing and some another. Invite children to come up with their own versions.</li> <li>- Play hiding games, separating a group of objects, e.g. count 5 shells, put some in your left hand and hide some in your right hand. <i>How many are in this hand? How do you know?</i></li> <li>- Discuss number composition in problems about fair shares using small totals e.g. six shared between two or three children. Spot and use opportunities for children to apply number combinations: <i>'There are 5 of us but only 2 clipboards. How many more do we need?'</i></li> <li>- Talk with children about the strategies they have used to solve a problem. Spot opportunities to playfully pose composition problems for children to explore e.g. <i>What if there are five people hiding in the tent and two come out?</i></li> <li>- Begin to model calculations in stories, rhymes and in real contexts, using a range of ways of representing (e.g. five-frames) using some vocabulary of addition and subtraction.</li> <li>- Use both informal and standard ways to record these, including tallies, arrows, plus and minus signs, and discuss <u>children's own representations</u></li> </ul>	<ul style="list-style-type: none"> <li>- Counting groups as part of routines, e.g. self-registration with ten-frames, dinner chart etc., discussing numbers of two groups making a total e.g. children here and away.</li> <li>- <u>A Voting Station</u>, discussing the numbers of children voting for the options (and yet to vote), making up the total for the class</li> <li>- Subitising games which involve quickly revealing and hiding numbers of objects, perhaps showing numeral cards and fingers and <u>talking about how children see numbers of things made up in a variety of arrangements</u>.</li> <li>-- <u>resources to make "staircase" patterns</u> which show that the next counting number includes the previous number plus one. e.g. <u>Ten terrible dinosaurs</u></li> <li>Books involving number composition e.g. <u>Anno's counting book</u>, <u>Maisie goes camping</u> and <u>One is a snail and ten is a crab</u></li> <li>- Displays of children's mathematical representations, including explanations of the children's meaning making.</li> </ul>
